

# Namibia Inflation Forecast Report

## Research & Financial Sector Development Department, Bank of Namibia

Updated - June, 2025

### Inflation Overview

**Domestic Inflation** - Domestic annual headline inflation declined to 3.5 percent in May 2025, translating into a 0.1 percentage point decrease from the previous month. The biggest contributors towards the decrease in annual inflation rate were, *Housing* (0.5 percentage points), *Transport* (1.0 percentage points), *Hotels* (0.6 percentage point), and *Heath* contributed 0.2 percentage point.

**Short Term Forecasts** - The short-term inflation forecast is presented in Table 2, with annual inflation expected to increase to 3.7 percent in June 2025 before rising further to 4.1 and 4.2 percent in July 2025 and August 2025, respectively.

**Medium Term Forecasts** - Through the medium term, our baseline estimates suggest that inflation will average 3.9 percent and 4.3 percent in 2025 and 2026, respectively (see Figures 1 and 2). This reflects a downward revision from the April 2025 MPC largely due to stronger exchange rate and moderate administered prices assumptions.
